

ERASE LARGE VOLUMES OF LAPTOPS, DESKTOPS, AND SERVERS

- CONNECT DIRECTLY TO DRIVE ENCLOSURES
- AUTOMATICALLY UNLOCK FROZEN DRIVES AND REMOVE HIDDEN AREAS
- CONFIGURE ALL ASPECTS OF THE

ERASURE PROCESS TO MINIMIZE OPERATOR INTERACTION AND TRAINING

SIMULTANEOUS PROCESSING

Erase over 500+ computers with one host. Command Center erases desktops, laptops, servers, and enterprise storage with PXE boot for fast and easy network extension and addition of client computers.

HIGHLY CONFIGURABLE

Add extra customizable fields to sync with your existing ERP and data collection systems. Command Center is totally flexible and configurable to suit your existing processes and infrastructure.

ERASE ANY DRIVE TYPE

Command Center network erasure supports ATA, eMMC, FibreChannel, IDE, NVMe, RAID, SAS, SATA, and SCSI.

EASY TO SET UP

Ziperase Command Center is delivered as a single, easy-to-install download. The software comes with its own full Linux-based operating system and data erasure software application that can be deployed and activated on your hardware.

Command Center provides a central hub to manage your data sanitization workflow including configuration and license management with remote monitoring of erasure sessions, networked report access, and integration into existing systems.

ERASE LARGE VOLUMES OF LAPTOPS, DESKTOPS, AND SERVERS

HOW IT WORKS

Ziperase Command Center is installed on a server, either centrally within an organization, or for a specific workbench. This server acts as a boot server, a report collation server, a licensing server, and allows you to control erasure clients remotely.

1. Command Center erases desktops, laptops, and servers over a local area network (LAN).
2. Target devices and the host server running Command Center are all set up in a LAN.
3. PXE boot target devices to see them displayed on the software host and erase them simultaneously with a click of a button. This erasure can be initiated from either the client or the host.
4. The setup can be run without a monitor, keyboard, or mouse at the client end. Command Center can also be used to erase small servers that contain multiple internal drives.

Create fields to enter job order, customer number, or even specify the cosmetic grade for individual assets. Create as many extra fields as you need to capture all the information necessary to fit your process. All Ziperase products can consolidate reports onto Command Center through a network connection.

Go to ziperase.com for more brilliantly easy data erasure solutions for laptops, desktops, servers, MacBooks, and loose drives.

ERASE EVERYTHING WITH ONE EASY-TO-INSTALL DOWNLOAD

CONSOLIDATED REPORTING

Each verified erasure provides a digitally signed, tamper-proof data erasure certificate. PDF, CSV, and JSON documents with system information customized to your needs for convenient consolidation of reports included.

EASY TO SET UP

Designed for automation with minimal user interaction, Ziperase Command Center is delivered as one easy-to-install download. The software comes with its own full Linux-based operating system and data erasure software application that can be deployed and activated on your hardware.

CLEAR AUDIT TRAIL

Comprehensive tracking of assets and product chains with complete transparency of the deletion process.

Easily customize, import, export, edit and review reports. Command Center's built-in database stores,

INTEGRATES WITH YOUR ERP

Add extra customizable fields to sync with your existing ERP and data collection systems. Command Center is totally flexible with quick and easy report search function and automatic report retrieval with live management.
